

# Bloggging Platform - Data Model (ER Diagram & Report)

This report presents the Entity-Relationship (ER) design for a blogging platform. It includes core entities such as Users, Posts, Comments, Likes, and Tags, along with their relationships.

| Entity  | Description                                        |
|---------|----------------------------------------------------|
| User    | Stores user details like username, email, password |
| Post    | Stores blog content created by users               |
| Comment | Stores comments on posts                           |
| Like    | Stores likes by users on posts                     |
| Tag     | Stores categories for posts                        |

**Relationships:**

- 1. A User can create multiple Posts (1:N).
- 2. A Post can have multiple Comments (1:N).
- 3. A User can like multiple Posts (M:N via Like).
- 4. A Post can have multiple Tags (M:N).

**ER Diagram (Text Representation):**

User → Post → Comment  
User → Like → Post  
Post ↔ Tag
